

An authoritative history of forensic science and the evolution of criminal investigation, from the author of *The Forensic Science of C.S.I.* and *The Human Predator*. Today, the basic scientific precepts of criminal investigation—fingerprinting, DNA, ballistics, and more—are widely known among professionals and lay people alike. But behind each of these now-commonplace concepts is a compelling story of the evolution of science and law, spearheaded by innovative thinkers, many of whom risked their careers and reputations for the sake of justice. Dr. Katherine Ramsland traces that development from thirteenth-century Chinese studies of decomposition rates through the flowering of science during the Renaissance, up to the marvels of the present day and beyond.

The Ascended: The Saving Angels book 3, Antipasta, DC Sneak Peek: Grayson (2015) #1, A Wreath of Canadian Song, Christian Ethics: An Introduction, History of the Old Cheraws: Containing an Account of the Aborigines of the Pedee, the First White Settlements, Their Subsequent Progress, Civil ... Afterward, Extending from About A.D. 173, He Knew He Was Right (Illustrated), La traviata: Vocal Score [A2341],
